

Job Description – Integration Consultant

1 Company Description

Proclus is a cutting-edge IT consulting firm headquartered in Switzerland, specializing in software integration and business consulting services. Our team empowers businesses to streamline operations, enhance productivity, and drive innovation through tailor-made solutions that align with clients' strategic goals.

Our locations:

- Belgium
- Lithuania
- Morocco
- Norway
- Poland
- Romania
- Slovakia
- Switzerland

2 Function Description

As an Integration Consultant, you will be responsible for consulting on software integration projects, specializing in different Integration Solutions and Electronic Data Interchange (EDI). This role involves collaborating with clients to streamline operations and enhance efficiency through seamless system integration.

You will receive comprehensive training within our company, where you will gain hands-on experience working alongside one of your colleagues. The workplace is based at your place of residence or in close proximity, with regular travel to (international) clients.

3 Responsibilities

- Specialize in software packages and hardware.
- Analyze customer challenges and document them in a blueprint.
- Build a "proof of concept" to assess the conditions for implementation.
- Set up solutions within the customer's infrastructure and help integrate it into their organization.
- Oversee the transition and make adjustments as needed.

4 Qualifications

- Eager to learn in areas such as ICT, electronics, processes, and languages.
- You are a determined individual who doesn't get discouraged easily and always thinks in a solution-oriented way.
- Working independently doesn't scare you, not even abroad.
- Intercultural skills: You feel comfortable working with clients and colleagues from diverse cultural backgrounds and adapt easily.
- Language skills: You can express yourself fluently, both in writing and speaking, in your native language and English. Knowledge of other languages, particularly German, is an advantage.
- Education: You have a degree in a scientific or economic field, complemented by broad ICT knowledge (programming, databases, modelling, protocols, formats).
